# 1. Key Pillars

Factored

# Key Pillars

## Technical Coding

Understanding of coding or business-case problems.

Thinking outside the box and interacting with the interviewer to overcome challenges related to limited information.

## Business Acumen

Grasping the big picture, business impact, and alignment with business needs.

## Communication

Demonstrating fluency, speech coherence, and effective body language.

Presenting technical knowledge and elevator pitch clearly and confidently.

## English

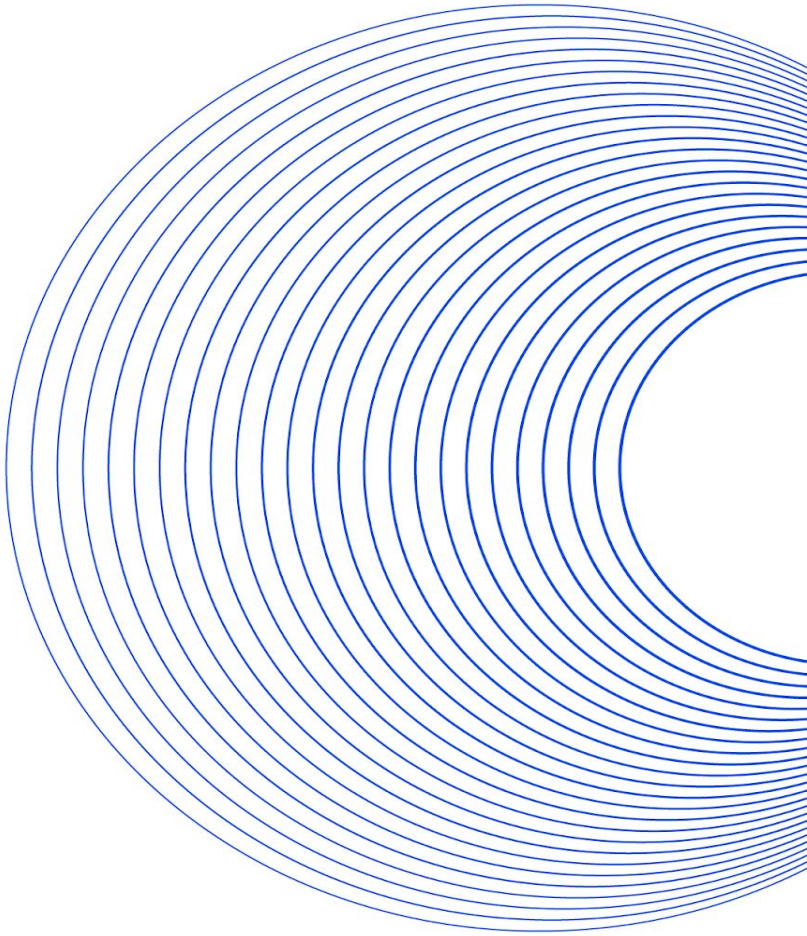

Practicing active listening.

Maintaining grammatical accuracy.

Speaking fluently and confidently.

Factored

# 2. Experience/ Communication Pillar

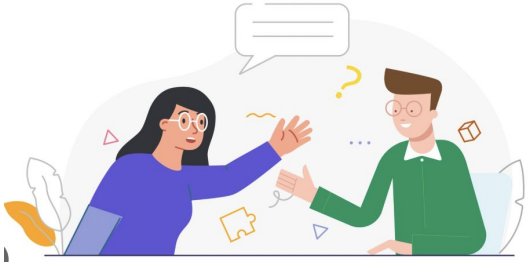

# Experience / Communication Pillar

Strong communication is essential for successful collaboration, influence, and execution across cross-functional teams. It reflects not just what a candidate knows, but how they convey and apply that knowledge. This pillar includes:

## Verbal Communication

## Non-Verbal Communication

Factored

# Highlight Your Experience With The Elevator Pitch

The introduction is your chance to highlight your skills and experience while aligning them with our current open opportunities. Follow these recommendations to make your pitch more compelling:

Factored

# Elevator Pitch

| | |
|---|---|
| **Length** | Maximum 2 minutes. |
| **Content** | Highlight relevant and specific experience that aligns with the job. |
| **Business impact** | Use numbers and data (e.g., net revenue, number of users, cost reduction, time efficiency) to demonstrate the business impact of past projects. |
| **Non-verbal communication** | Express ideas confidently using hand gestures while maintaining eye contact with the camera. |

# Elevator Pitch Example

My name is ... and as a Machine Learning engineer, my career is driven by a passion for harnessing the power of data and cutting-edge algorithms to drive tangible business results. With a deep understanding of both the technical and business aspects, I have experience with Machine Learning techniques, such as Supervised and Unsupervised Learning, Time Series Forecasting, Deep Learning others, and also with Optimization, using both heuristics and mathematical solvers.

Leveraging my expertise in tools like Python, TensorFlow, and PyTorch, I have built and deployed scalable machine learning systems, resulting in significant cost savings, improved efficiency, and enhanced customer experiences.

For example, one of my most relevant projects involved developing a predictive maintenance model for a manufacturing company. By analysing real-time sensor data, I designed an algorithm that accurately predicted equipment failures, allowing the company to proactively schedule maintenance, minimize downtime by 20%, and save millions in repair costs.

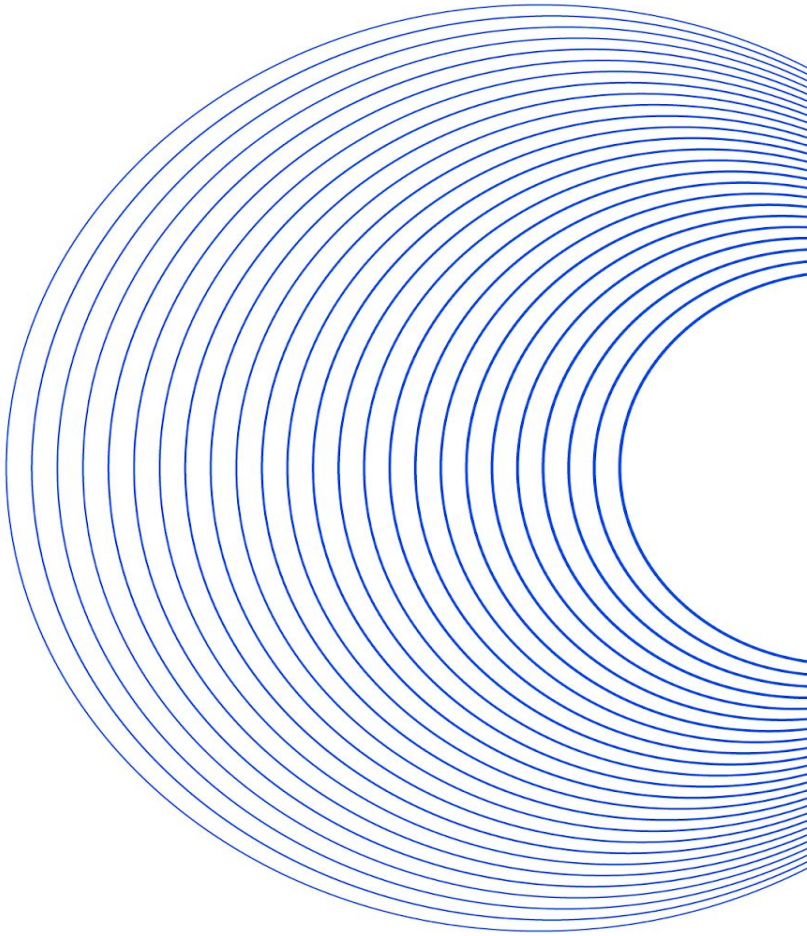

My main motivation lies in my passion for applying advanced analytics and machine learning techniques to drive innovation, improve decision-making, and positively transform businesses and society as a whole.

That's why in my spare time,  I have completed 3 courses recently about Advanced Machine Learning, Computer Vision and Machine Learning with Python: From Linear Models to Deep Learning while acting as a volunteer mentor.

- Summary of key expertise
- Main tech-stack
- Most relevant project with business results
- Motivation

# 3. Business Acumen Pillar

# Business Acumen Pillar

It includes having a fundamental understanding of how a business operates, then using that knowledge effectively to make logical business decisions. Business acumen is a portfolio of knowledge, technical skills, and soft skills, used to positively impact an organization in benefit of career growth

**More Senior =** More business knowledge and contribution to the organization.

# Project Examples: CAR Framework

Share the impact of your past work and show how it connects with Factored needs:

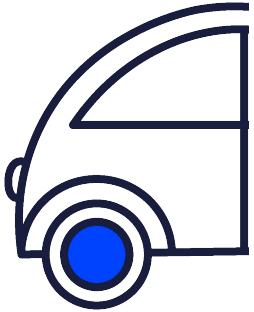

💡 **PRO TIP!**
**Implement the "CAR framework"**

C: Context
A: Action
R: Result

- Choose a project that might be aligned with Factored requirements.
- Follow the CAR framework and present it in **5 minutes**.

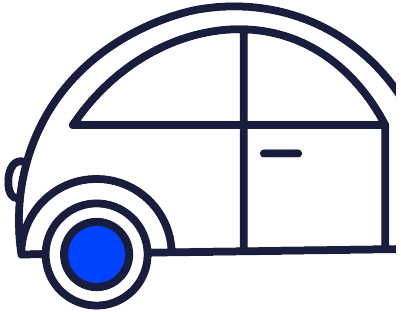

# Project Examples: CAR Framework

## C: Context

30 seconds

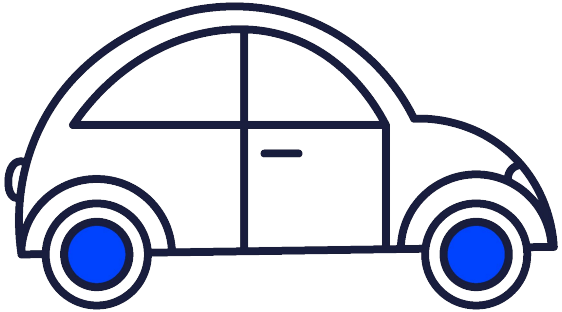

Providing information about the previous company, project and/or main issue to solve.

## A: Action

1.5 minutes

Describing main contributions, tech-stack and how you solved the problem.

## R: Result

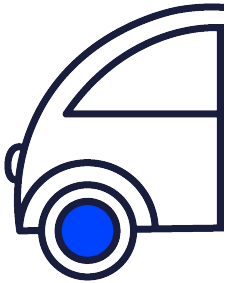

1 minute

Validating your approach with results and business impact: *Increased net revenue, number of users or reduce time and costs*.

Factored

# Project Examples: CAR Framework

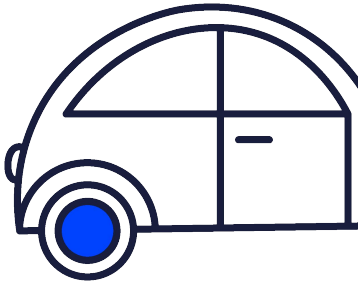

Please find below a guide on the type of project content you should share with the recruiter during the interview:

## C: Context

Providing information about:

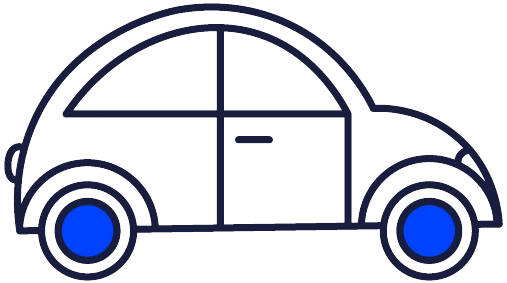

- The business problem you solved.
- The business situation that led to the project.
- Your main stakeholders.
- How and to whom you communicated changes and progress.

## A: Action

Providing information about:

- Your main responsibilities.
- Techniques, tools, or frameworks you used and learned to successfully complete the project.
- How you handled deadlines and priorities.
- Initiatives you proposed to ensure the project's success.

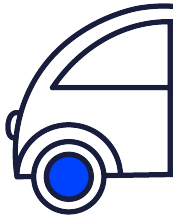

## R: Result

Providing information about:

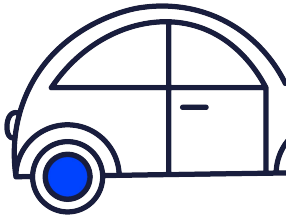

How you validated your approach with results and business impact, such as increasing net revenue, growing the number of users, or reducing time and costs.

# CAR Framework: Example For a DE Project

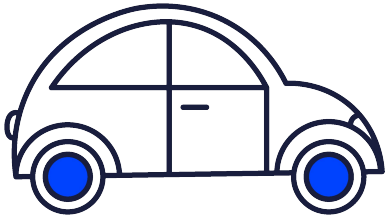

## C: Context

XYZ Corporation faced critical roadblocks with its ETL process, causing delays in reporting and scalability issues. Manual processes resulted in bottlenecks, impacting data reliability and hindering business growth.

## A: Action

As the lead data engineer, I initiated a comprehensive assessment. Recognizing the need for a scalable solution, I redesigned the ETL architecture using Apache Spark, enabling parallel processing and optimized partitioning. Simultaneously, I introduced stringent data quality measures and automated workflows with Apache Airflow.

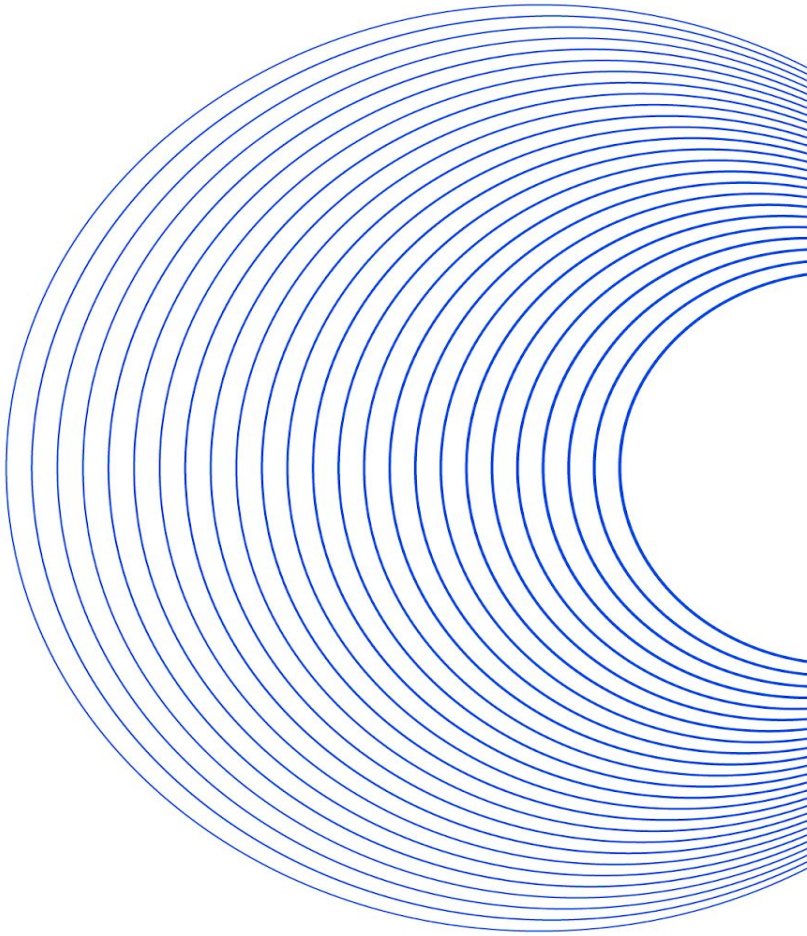

## R: Result

The ETL process time was cut by 40%, overcoming delays. Scalability improvements allowed seamless handling of a 50% increase in data volume. Data quality enhancements reduced errors by 20%, ensuring more accurate insights. Automation led to a 30% cut in infrastructure costs.

# 4. English Pillar

Factored

# English Skills - Key Metrics

## Listening

Make sure you accurately understood the interviewer's message by paraphrasing the question (repeating the idea with your words) or asking a follow up question.

## Vocabulary

Use "I" when describing your actions. Expand your vocabulary when explaining your professional experience by incorporating powerful verbs such as: "*I strongly contributed, managed, led, implemented, resolved*".

## Fluency

Maintain a calm speaking pace and pay attention to your pronunciation.

## Grammar

Ensure you follow sentence structure while correctly using verb tenses and connectors.
